JOB READY PROGRAM | UDFI PHILIPPINES

Students are finishing the Job Ready Program too quickly

Problem

How do we tell whether a student is learning too quickly, at the cost of understanding?

Response

An Early Warning System that alerts teachers when a student completes too many quizzes too quickly, and shows relationship managers which teachers need support.

2,290

students enrolled in the Job Ready Program

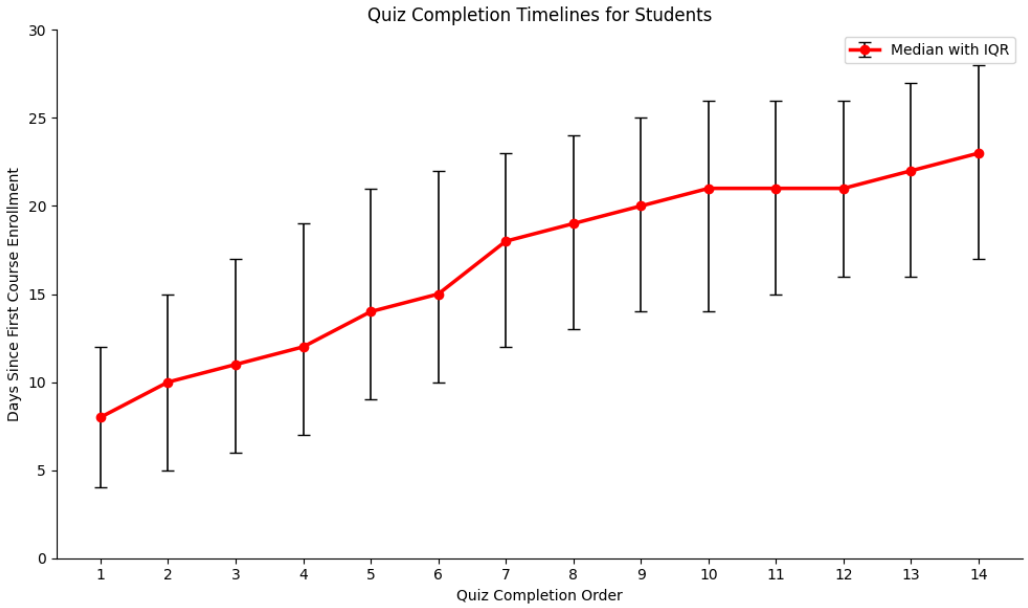

229 (10%)

completed all 14 quizzes in under 11 days

~30 days

expected course duration

Learners finish quizzes in burst, so a simple gap rule would raise false alarms.

~8 days

Median time to complete one quiz

~23 days

Median time to complete all quizzes

Quizzes 10-12

Typically land together around day 21

Early finishers score lower on lessons, so Quiz 7 and Quiz 14 become our checkpoints

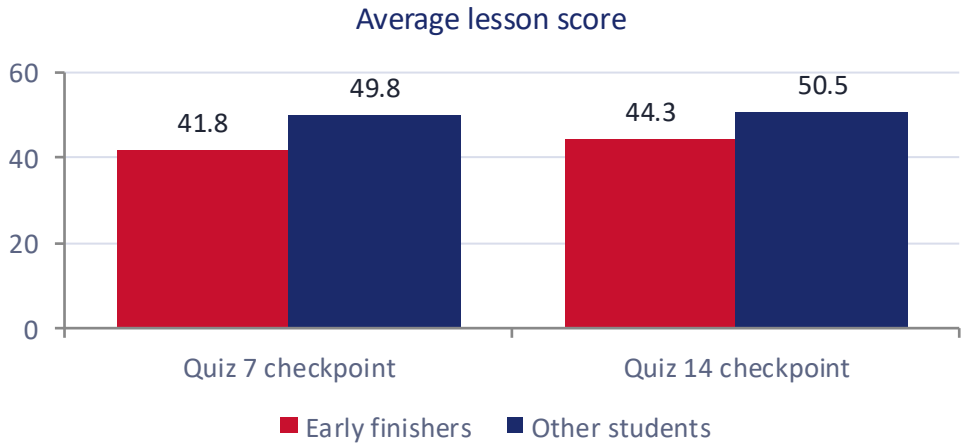

QUIZ 7 CHECKPOINT

7 quizzes within 2 days

QUIZ 14 CHECKPOINT

14 quizzes within 5 days

Thresholds are set empirically from historical completion percentiles. Students inside either window are flagged as early.

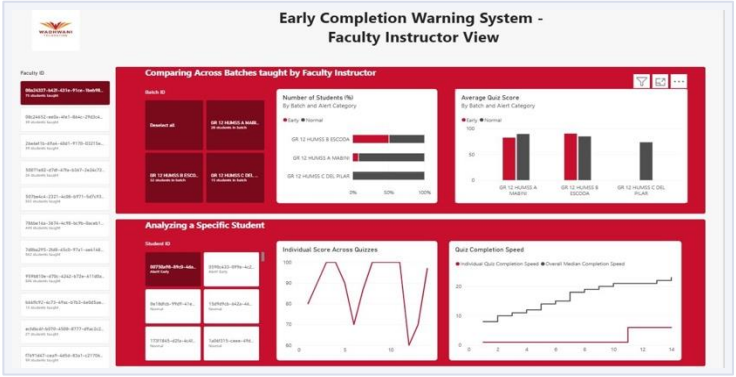

d = −0.51 p = 0.0139
Moderate effect at Quiz 7

d = −0.41 p = 0.0047
Moderate effect at Quiz 14

Instructors review flagged students, and relationship managers act on patterns.

Alerts for Faculty Instructors

- A faculty instructor can check across the batch to see the overall health of the cohort, which would be based on the score of the quizzes.
- They can also check in with the student on how they are doing and whether support is needed. They can see the a student's journey compared to a regular student.

Insights for Relationship Managers

- For the relationship manager, they can compare the institution-wide KPIs. If several teachers at one institution showing abnormal completion points to a program implementation issue, then the relationship manager can step in to support those teachers.

Pace is a flag, not a verdict: Outcome Linkage and Governance

Graduation

- Fast completers stay eligible if they meet program requirements.
- The EWS flags unusual pacing, not failure.
- Lessons and transformation rate are checked alongside quizzes.

Scalable verification

- The relationship manager stays the primary coordinator.
- Teachers review the students flagged in their batches.
- Relationship managers monitor patterns across teachers and institutions.

Governance

- Teachers see only their own batches; managers only their institutions.
- Thresholds are empirical, so review them with every new batch.
